Dashboard
Create a Listing
Account Actions

Hi, User. Here are your listings and requests.

Listings

City	Price/m	SqFt	Action
Seattl	2950	130	edit/delet
Tokyo	2500	1000	edit/delet

Requests

City	Price/mo	SqFt	Action
Seattle	2950	1300	cancel
Tokyo	2500	1000	cancel

*The Account Action will show the user's listing and requests.
if you cancel the request, the property will show up in the dashboard and be remove from account request table*

Things to Fix:

1. App crushes
when I try to create new listings/edit listings without logging in.
Ideal: present error messages or redirect back to login/register page

2. Retrieve logged-in user info in front end

Cannot retrieve info from jwt.userToken since it is httpOnly?

Maybe I can use axios to get user info from DB as well?

Things to Add:

1. Add images to listings:
for better understanding of the property and better user experience .

2. Add Request function:
Once being requested, the listing shows up in user's my account page. In the meantime, it shows up in owner's my account page marked as "requested"
(maybe can also show the basic info about the user who requested this property. ex first name)

3. Interaction between owner and requester:
ex direct messages
